

MOBILITY 1.3.1 RELEASE NOTES

January 2006

TOPICS

1. Milepost Calculator
2. Collision (CLAS) Views
3. Feature List Fix
4. Link to WSDOT Online CLCF

1. Milepost Calculator

Due to popular demand and the potential usefulness in completing on-line CLCF forms, this build includes a first-round version of a milepost calculator.

To open the calculator, a reference point (RP) must be selected in the feature list. Right click the mouse and choose Milepost Calculator from the list. The road number, name, milepost, direction ahead and direction back of the selected RP are displayed. Click on the appropriate direction on the direction pad. Note that the only directions available are the direction ahead and back for the selected RP. Type the offset (distance) and click on 'Calculate'. The 'Resulting Milepost' will display. Offset can be calculated in either Feet (default) or Miles.

The Milepost Calculator can either be left open or closed. If it is left open, it can be used for milepost calculations of other roads by entering a new Reference Milepost and Offset. However, the road number, name and directions will not change.

2. Link to On-line CLCF

For your convenience, we have included a link to WSDOT's on-line CLCF web site. You need a login and password from WSDOT before you can log on to the application.

3. Collision Views

qCLASInvalidRoads

Lists collision data for roads that are not in your county in Mobility, but CLCF data from WSDOT shows that the collision occurred in your county.

qCLAS

All CLAS fields are in this view.

4. Feature List Fix

There were several instances of the Feature List report (deployed in Release 1.3.0) timing out. We have fixed this problem.

As always, don't hesitate to call (360.664.3299 X-243) or email mobsupport@crab.wa.gov if you have questions or concerns.
